Helping Greece's Maran Tankers achieve ISO 50001 certification

In December 2011, Lloyd's Register awarded ISO 50001 certification to Maran Tankers Management, Inc. (MTM) following audits conducted by experts from our marine and Lloyd's Register Quality Assurance (LRQA) management systems teams. This new energy management standard helps companies systematically improve energy performance.

"Certification to ISO 50001 was a milestone for our company," MTM Managing Director Stavros Hatzigrigoris said. "Having in place an effective and efficient energy-management system for the operation of our fleet brings real added benefits to the company and allows us to be proactive in satisfying upcoming regulations, customer requirements and society's expectations."

Find out how we can help you achieve ISO 50001 certification: call +30 210 4580907 or email lrqa-marinebsc@lr.org

Chandris – managing energy across the fleet

Greek ship management company Chandris (Hellas) Inc. has chosen Lloyd's Register to provide ship energy efficiency services across its fleet in a bid to identify key energy efficiency performance indicators and apply energy-saving measures.

We are collaborating closely with Chandris covering areas such as regulatory background and requirements, implementation of ship-specific energy efficiency measures and training of shore-based staff and crew.

The project will enable the company to enhance its in-house energy efficiency capacity and achieve fuel and operational savings.

Visit www.lr.org/energymanagement to see how we can help you.

Complying with exhaust emissions regulations can be challenging. We provide specialist exhaust emissions workshops that help you understand your options
